

Certified Hyperledger Developer

Running the Application

Front End Application

This course do not include the development for the Front End Application. We have a sample Front End Application Created and will provide the same to you.

The application is build using Node Js, Bootstrap and Express JS. This is configured to connect to the Local Fabric Blockchain.

We are using the Composer SDK for Node Js and the application is packaged as per package.json

Installing the Application

Go into the web-app folder and install the dependency:

```
cd web-app/  
npm install
```

Starting the Application

To start the application run the following command:

```
npm start
```

The application should now be running at: <http://localhost:8000>

THANK YOU!
