Certified Hyperledger Developer

Packaging the the Project

Files Required

We will generate the Business Network Archive (BNA) file from the root directory.

This file will contain your network including:

- the model defined in the org.clp.biznet.cto file in the models folder
- the logic behind transactions in the logic.js file in the lib folder
- permissions defined in the permissions.acl file
- queries defined in the queries.qry file

NPM Help!

You might notice that the project also contains package.json file which helps us to package the complete application. This file has defined the scripts and versions of all the libraries required. To generate your BNA file. You need to go in to the project folder and run the following command:

```
npm install
```

The composer archive create command in package.json has created a file called clp-network@0.0.1.bna.

THANK YOU!
